

Sociocracy 3.0 - Effective Collaboration at Any Scale

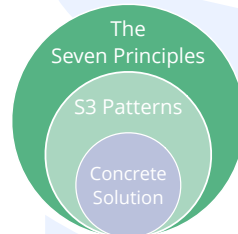

The Seven Principles for successful collaboration

Patterns and Principles

Sociocracy 3.0 contains around 70 different patterns that can help organizations resolve the impediments to successful collaboration.

Each pattern is a template for navigating a specific kind of problem or complex challenge with an agile* and sociocratic** mindset. Patterns in S3 are simple, (mostly) independent and mutually reinforcing.

When using a pattern in your organization, you need to adapt it to your context, and evolve your concrete implementation with what you learn. When adapting and evolving patterns, use the Seven Principles as a guide.

Driver for Creating Sociocracy 3.0

In 2014 we came together to co-create a body of Creative Commons licensed learning resources, synthesizing ideas from Sociocracy, Agile and Lean. We discovered that organizations of all sizes need a flexible menu of practices and structures – appropriate for their specific context – that enable the evolution of a sociocratic and agile mindset to achieve greater effectiveness, alignment, fulfillment and wellbeing.

James Priest and Bernhard Bockelbrink

*Agile: A mindset for navigating complexity through an iterative, collaborative, value-based, and self-organized approach.

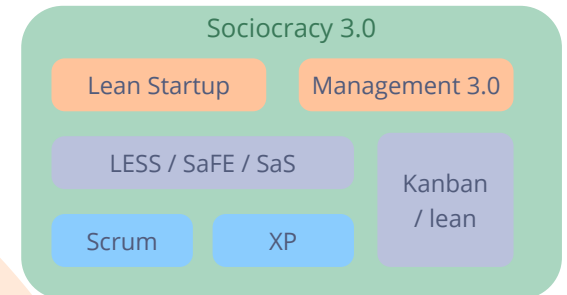

**Sociocracy: A mindset where everyone who is affected by a decisions can influence those decisions.

What's in it for me?

Sociocracy 3.0 — a.k.a. “S3” — helps you discover how to best reach your objectives and navigate complexity, one step at a time, without the need for sudden radical reorganization or planning a long-term change initiative:

Simply start with your area of greatest need, select one or more patterns to try, move at your own pace and develop skills as you go.

Regardless of your position in the organization, you will find patterns that are relevant and helpful for you.

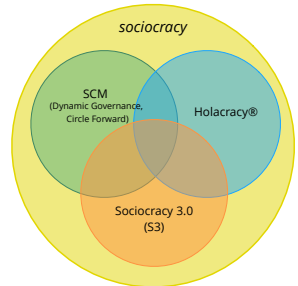

S3 and the family of lean and agile methodologies

Making Sense of Organizations

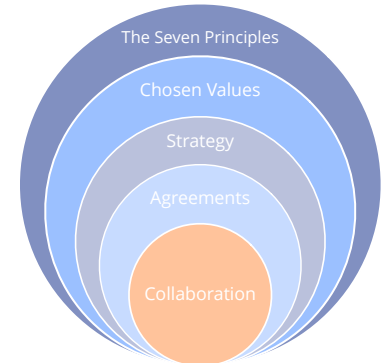

Navigate Via Tension...

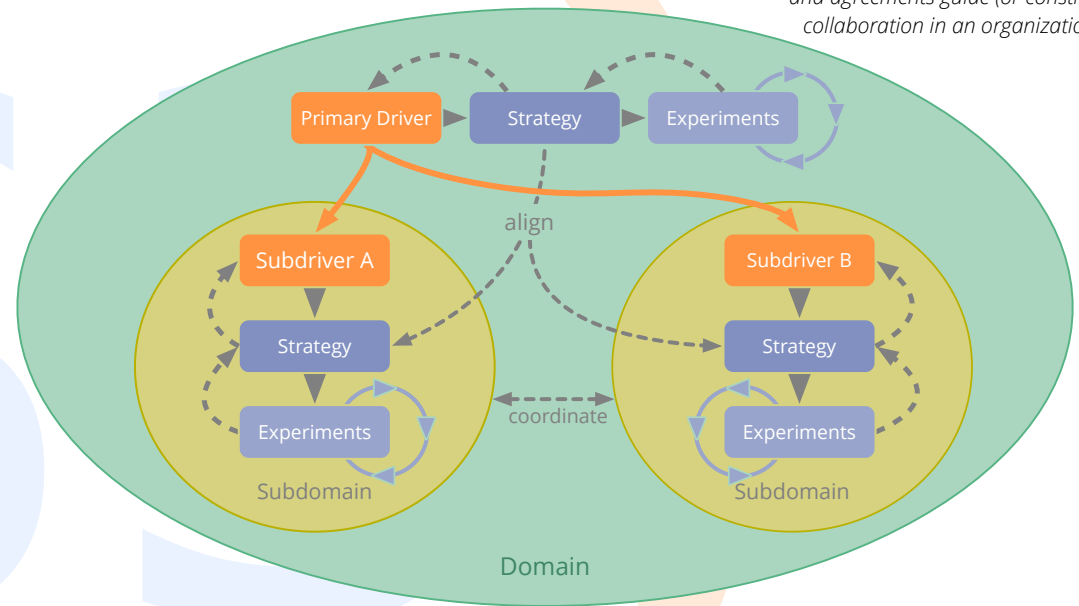

How to Navigate Via Tension, Describe Organizational Drivers and Respond to Organizational Drivers

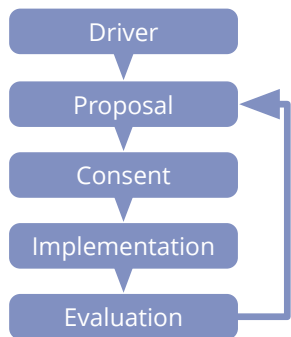

Domains in an organization

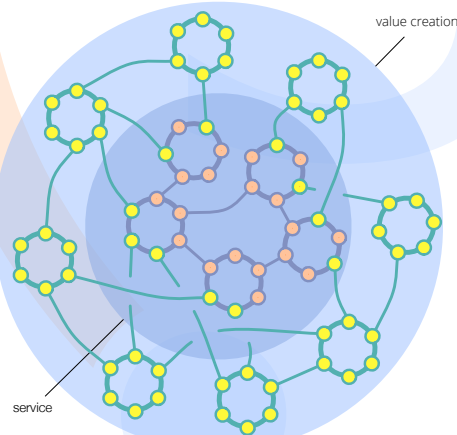

The Seven Principles, chosen values, strategy and agreements guide (or constrain) collaboration in an organization.

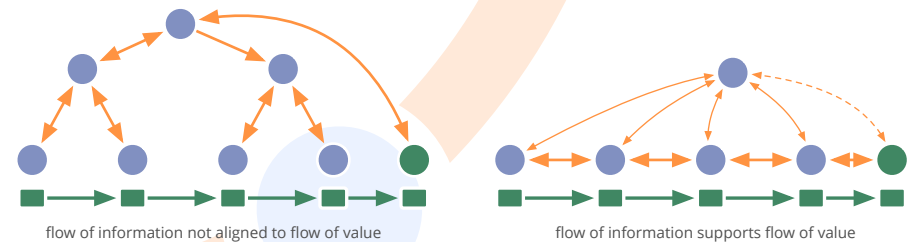

Drivers, strategies and experiments in domains and subdomains

Decision-making in complex situations

Peach Organization: An example of post-hierarchical structures.

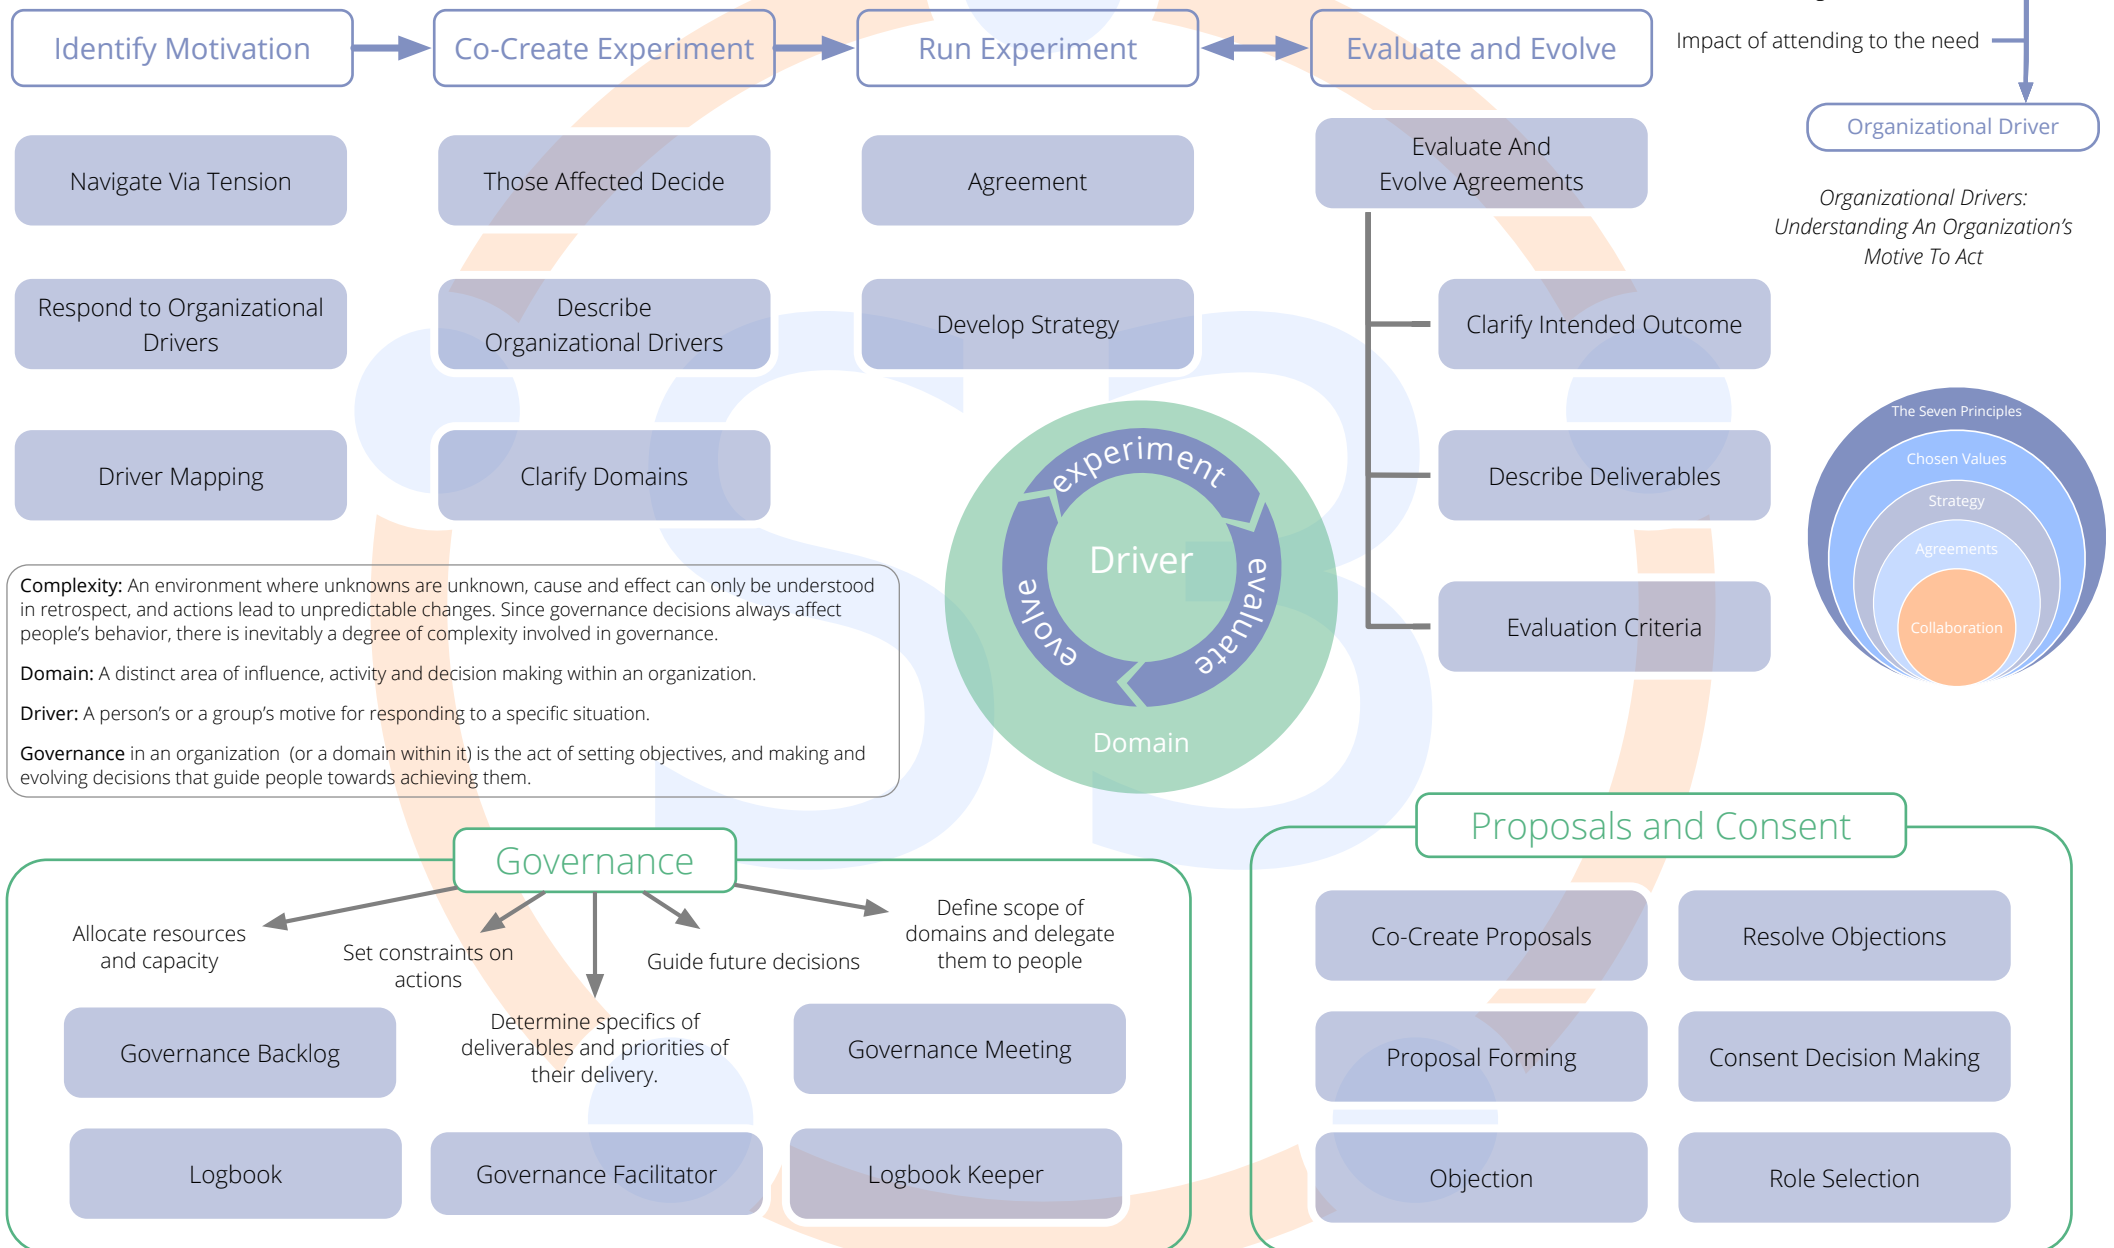

→ flow of value, ■ deliverables, → flow of information (and influence), ● customer, ● groups or individuals

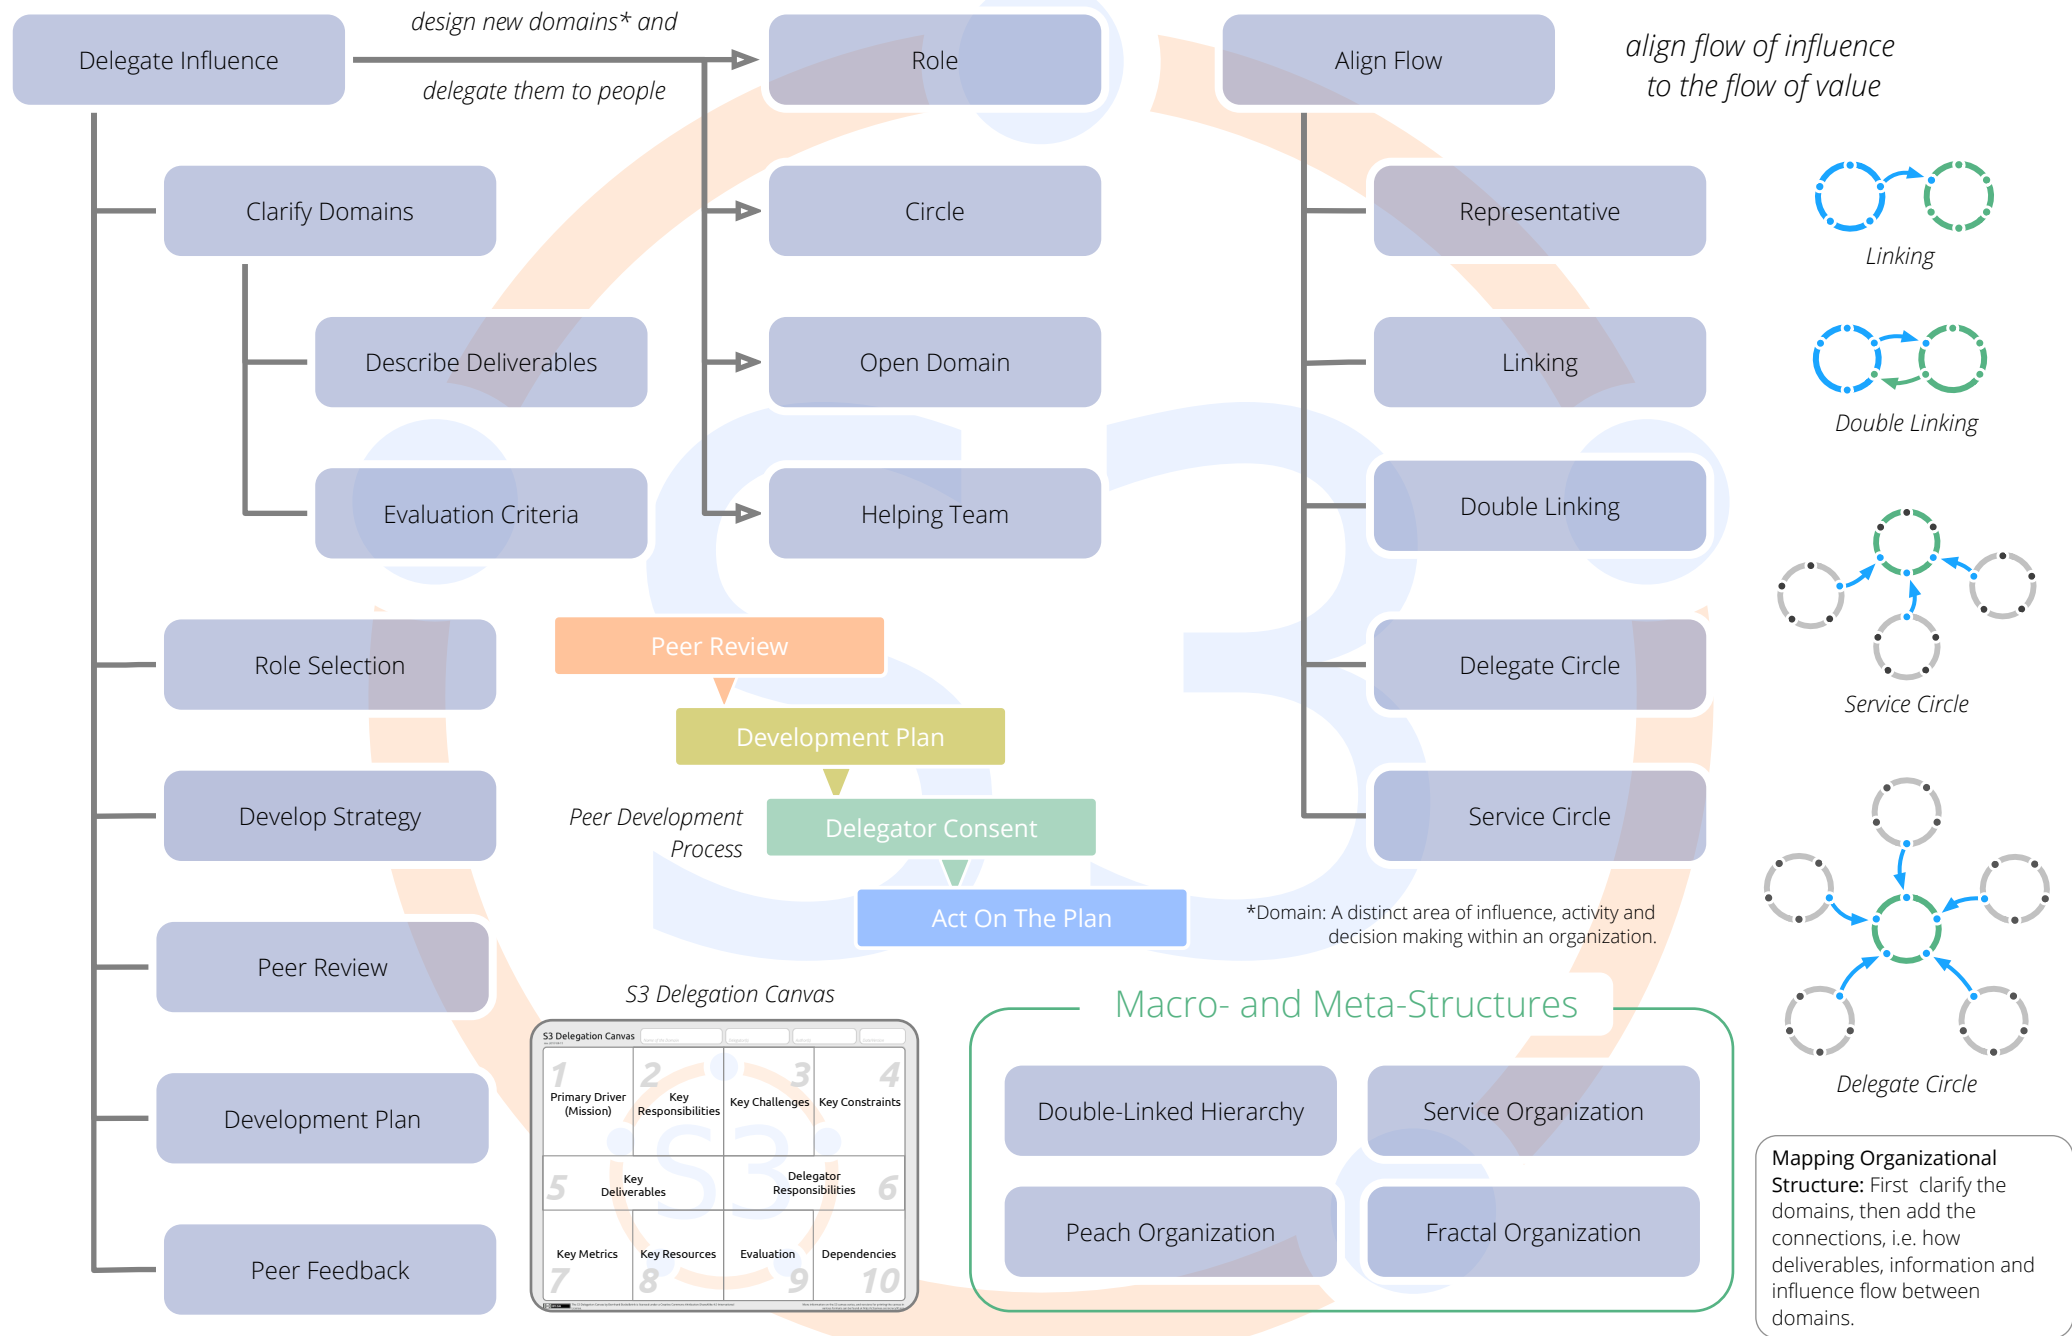

Align the flow of information to the flow of value.

Responding to Complex Challenges

S3 promotes a collaborative and hypothesis-driven approach to decision making:

Supporting Change in Teams and Organizations

Help identify the biggest impediment to successful collaboration, co-create a plan what to do about it in your circle of influence (taking into account any patterns in S3 that might apply), consider any objections to that plan, and then implement it, evaluating the results and evolving the plan as you go. Repeat this process with what is now the biggest impediment. Avoid introducing S3 to people beyond suggesting specific patterns if they don't indicate interest, and avoid introducing new language (like drivers, consent, etc.) if there is no need to do so.

"Is my behavior in this moment the greatest contribution I can make to the effectiveness of this collaboration?"

A Logbook Entry For An Agreement

Rounds

To maintain equivalence and support effective dialogue, give everyone the chance to speak in turn. Sit in a circle, begin each round with a different person, and change direction (clockwise or counterclockwise) to bring variation to who speaks first and last, and to the order of contributions.

Understanding Objections

When seeking out potential objections, consider:

- effectiveness:** why the intended outcome would not be (fully) achieved
- efficiency:** why it would be wasteful to proceed as proposed (or previously agreed)
- side-effects:** the negative consequences something would have elsewhere (in the same domain, in the wider organization, or beyond)

The information revealed by objections can be used to improve:

- current and planned action
- how people execute on decisions
- existing agreements
- proposals
- shared understanding of drivers

Not all arguments raised are objections. Distinguish between objections, which always reveal useful information, and other arguments that are based only on assumption or preference.

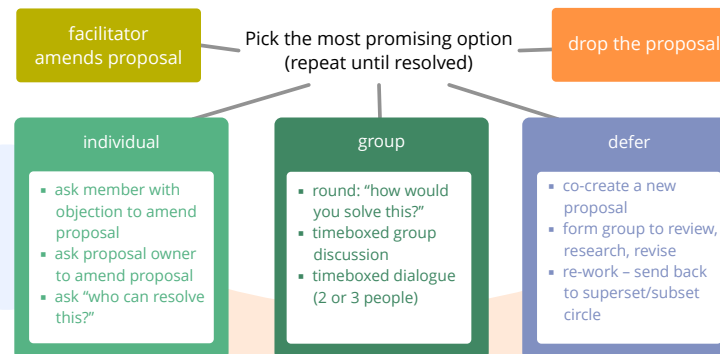

A **concern** is an assumption that doing something (even in the absence of objections) might stand in the way of (more) effective response to an organizational driver.

Resolving Objections — From Disagreement To Synergy

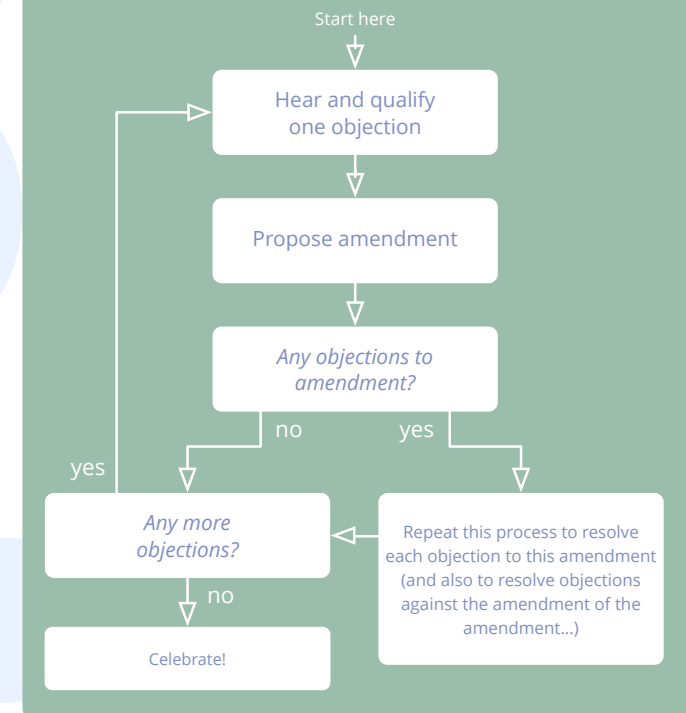

An **objection** is a reason why doing something stands in the way of (more) effective response to an organizational driver (i.e. an organizational requirement).

Objections reveal information about **unintended consequences**, or about **viable ways to improve**. When all objections are resolved, all available information is processed and so a decision is **good enough for now and safe enough to try**.

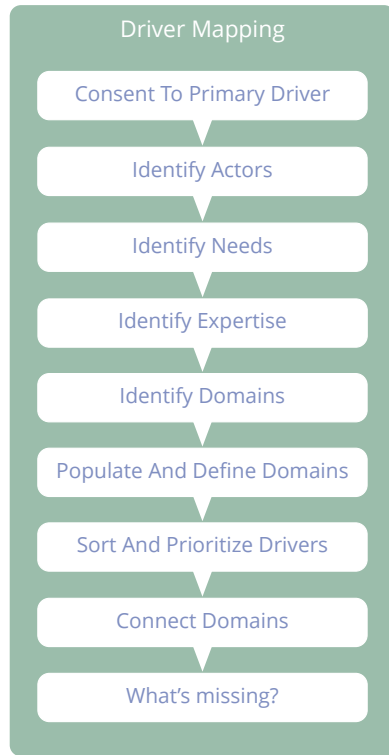

Resolve objections — one at a time

A process for resolving objections

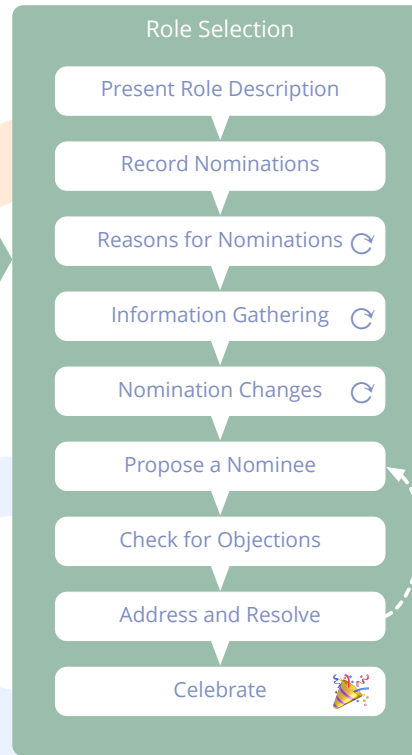

Group Processes

*A Domain Description
(e.g. for a Role or Circle)*

| Name of the Domain | |

Role Selection

A group process for selecting a person for a role on the strength of the reason.

Instead of simply assigning people for roles, or making a choice based only on majority, use the role selection process to:

- tap collective intelligence by hearing and deliberating on reasons for nominations
- increase ownership over the decision
- ensure support for the role keeper by those affected.

A prerequisite to the selection process is a clear description of the role's domain.

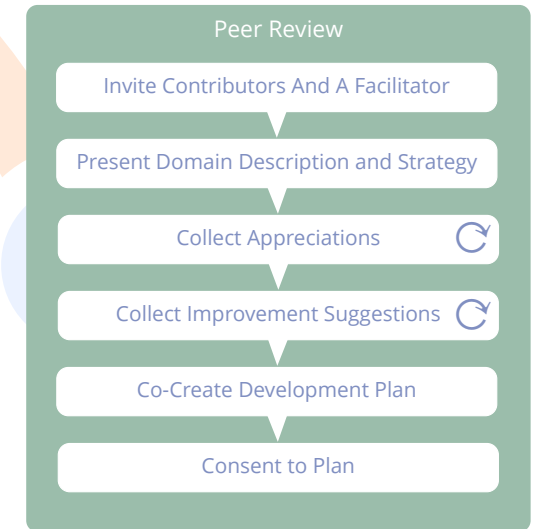

This pattern can also be used in any situation where there is a need to choose between a variety of options.

Peer Review

The role keeper — or team — leads the peer review by setting up the process and speaking first in each step..

Ensure you invite people with complementary perspectives.

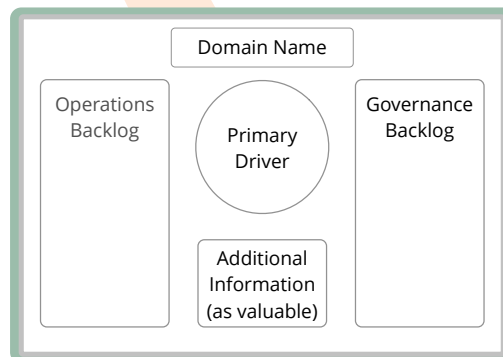

Improvement suggestions may relate to personal development, collaboration, updates to the domain description (including the driver) and strategy.

Driver Mapping

A workshop format to identify an effective response to a complex situation: organize start-ups, kick-off projects, tackle major impediments or opportunities, develop organizational structure to better enable the flow of value.

A (small or large) group identifies and clusters drivers, to then progress quickly from concept to action in smaller and self-organizing teams.

*A Template For Collecting
Information About A
Domain During
Driver Mapping*

Development Plan

A plan for how to develop more effective ways of accounting for a domain, agreed between delegator and delegatee.

The development plan may be created for a person in a role, or for a team (e.g. a department, circle or open domain).

Development may happen in the form of refining the description of the driver and the domain, making amendments to strategy, or new or updated agreements and specific actions to be taken, either within the domain of the delegator, or the domain of the delegatee.

A development plan (and any accompanying recommendations for changes to the descriptions of the domain and the driver) requires consent from both the delegatee and the delegator.
